

Eliquo Announces Global Accessibility eLearning Library to Help Digital Designers Meet WCAG Standards

Dubai, UAE — Fall 2026: Eliquo, a long-standing leader in digital content design training is expanding its global impact with the release of its new on-demand WCAG and accessibility eLearning library built specifically for the professionals who create the content people rely on every day.

For more than 24 years, Eliquo has trained designers, developers, and content teams to build digital experiences that are usable, inclusive, and compliant. As accessibility requirements continue to rise across jurisdictions and as WCAG-aligned expectations become the de facto global benchmark, organizations are increasingly looking for practical, role-based training that goes beyond theory and translates directly into real work.

That need is what prompted the creation of the new eLearning library.

Digital content creators are being asked to deliver accessible websites, documents, forms, videos, and marketing materials often under tight timelines, with limited internal expertise. At the same time, many teams still rely on informal knowledge transfer or generic training that doesn't reflect the day-to-day realities of modern production tools and workflows. Eliquo developed its library to close that gap with structured, exercise-based learning that can be deployed at scale.

The library provides learners with step-by-step instruction focused on applying WCAG principles in the real world helping them design and produce content that meets accessibility expectations from the start, rather than attempting costly retrofits later. Learners gain practical skills to identify accessibility issues, implement corrective techniques, and build repeatable habits that improve quality and compliance across an organization's content pipeline.

Designed for global audiences, the library supports teams across regions and industries that publish digital communications, public-facing information, and essential services. The result is more inclusive content, reduced risk, faster production cycles, and greater confidence for the people responsible for creating digital experiences.

To learn more about Eliquo and their WCAG & Accessibility eLearning library, visit Eliquo online at <https://ondemand.eliquotraining.com/> or connect with the team at stand 6217 at the 8th edition of **AccessAbilities Expo** that's taking place from 19th to 21st October 2026 at the Dubai World Trade Centre.
