

CareSynq Home Healthcare LLC Launches in Dubai, Bringing Hospital-Grade Care Directly to Patients' Homes

Dubai's First AI-Powered Home Healthcare Provider Offers 24×7 Nursing, Doctor Visits, Physiotherapy, IV Drip Therapy, and Lab Services — All at Home

DUBAI, UAE — CareSynq Home Healthcare LLC, a Dubai Health Authority (DHA)-licensed home healthcare provider, today announced its formal launch as the UAE's first AI-powered home healthcare service. Operating from its base in Deira, Dubai, CareSynq is redefining the future of patient care by bringing clinical excellence out of hospitals and into the comfort of patients' homes — supported by cutting-edge remote patient monitoring technology.

Backed by a dedicated team of DHA-licensed nurses, physicians, and allied health professionals available around the clock, CareSynq delivers a comprehensive suite of medical services designed to meet patients where they are — at home. The company's mission is rooted in a belief that recovery and wellbeing are best supported in familiar, comfortable surroundings, without compromising on the standard of care expected in a clinical setting.

Comprehensive Home Healthcare Services

CareSynq Home Healthcare LLC offers a full spectrum of clinical services, including:

- **24×7 Live-In Nursing Care:** Continuous, round-the-clock nursing support for patients requiring full-time clinical attention at home.
- **Doctor at Home:** DHA-licensed physicians conduct home visits for consultations, medical assessments, and follow-up care, eliminating the need for hospital trips.
- **Physiotherapy at Home:** Certified physiotherapists deliver personalised rehabilitation programmes in the comfort of the patient's home, supporting faster recovery.
- **IV Drip Therapy at Home:** Hospital-grade intravenous therapy — including hydration, vitamin infusion, and medically prescribed IV treatments — administered safely at home.
- **Lab at Home:** Patients can book diagnostic lab tests from home, with results delivered digitally for convenience and speed.
- **AI-Powered Remote Patient Monitoring:** Through the proprietary CareSynq app, patients' health data is monitored in real time, enabling faster clinical intervention and greater peace of mind for families.

“We founded CareSynq on a simple but powerful conviction: that world-class healthcare should not be confined to hospital walls. Every patient deserves access to safe, dignified, and compassionate care in their own home. By combining the expertise of our DHA-licensed clinical team with the power of AI monitoring, we are making that vision a reality for families across Dubai.”

— Naveen Pulicharla, Founder, CareSynq Home Healthcare LLC

Setting a New Standard with AI-Powered Care

CareSynq is distinguished by its integration of technology into clinical care delivery. The CareSynq app enables real-time remote patient monitoring, allowing clinicians and family members to track vital health indicators, receive alerts, and coordinate care seamlessly. This AI-driven layer of oversight ensures that patients receive proactive attention rather than reactive intervention — reducing emergency situations and improving overall health outcomes.

As Dubai accelerates its digital health agenda, CareSynq is positioned at the forefront of a healthcare evolution — one that places the patient at the centre, leverages technology as an enabler, and treats the home as the primary site of healing.

DHA-Licensed and Fully Compliant

CareSynq Home Healthcare LLC operates under full Dubai Health Authority (DHA) licensure. Every clinical professional on the CareSynq team is individually DHA-licensed, ensuring that all services meet the highest regulatory, safety, and ethical standards required to practice healthcare in the Emirate of Dubai.

About CareSynq Home Healthcare LLC

CareSynq Home Healthcare LLC is Dubai’s first AI-powered home healthcare provider, licensed by the Dubai Health Authority (DHA) and headquartered in Deira, Dubai. Guided by the promise of “Hospital-Grade Care. At Home,” CareSynq offers 24×7 live-in nursing, doctor home visits, physiotherapy, IV drip therapy, lab-at-home services, and AI-powered remote patient monitoring through the CareSynq app. For more information, visit www.caresynqai.com.
