

## **Eview Empowers Global Telecare Brands with Agile OEM and ODM Services**

As the demand for assistive technology grows, global telecare providers need manufacturing partners capable of delivering scalable and customized solutions. Shenzhen Eview GPS Technology meets this demand through its comprehensive OEM and ODM services, backed by over 10 years of expertise in the Internet of Things sector.

Operating from its 9,000-square-meter facility, Eview maintains a robust production capacity of 90,000 units per month. This infrastructure ensures stable supply chains and on time delivery for clients across 140 countries. Eview supports its partners with a transparent customization process, offering deep software integration through Open API and SDK packages. This allows seamless connection to existing monitoring platforms.

Holding ISO 14001 and BSCI certifications, Eview aligns with global environmental and social governance standards. By combining resilient manufacturing with dedicated engineering support, Eview enables global brands to bring tailored personal safety devices to market efficiently and securely.
