

## **Eview Showcases Highly Reliable mPERS Solutions at AccessAbilities Expo 2026**

Guided by the brand proposition "Reverence for Every Call", Shenzhen Eview GPS Technology is bringing its highly durable personal safety devices to AccessAbilities Expo 2026. Recognizing that mobile Personal Emergency Response System devices are vital lifelines for the elderly and people of determination, Eview implements rigorous quality control measures to ensure consistent performance.

Every product design is subjected to extensive durability and environmental testing. Devices undergo 20,000 SOS button press tests to guarantee that emergency alerts trigger successfully when needed. To withstand daily accidents, the hardware is tested for 1 meter drops across all six faces. Furthermore, Eview devices feature an IP67 waterproof rating and 80 degrees Celsius hot water endurance, allowing users to wear them safely in high risk areas like bathrooms.

By maintaining a field failure rate of under 0.3 percent, Eview provides healthcare providers with dependable monitoring tools. This commitment to quality minimizes maintenance costs and delivers true peace of mind to users and their families.
