

G24 Ultimate NoRamp® Wheelchair Accessible Vehicle Conversion by Gilani Mobility New Zealand

Access to safe and comfortable transportation is essential for maintaining independence and mobility. The G24 Ultimate NoRamp® Wheelchair Accessible Vehicle Conversion by Gilani Mobility New Zealand is an innovative solution designed to make everyday travel easier for wheelchair users and their families.

The G24 Family Van offers a flexible and practical design with the option of seating for up to 8 passengers or 5 seats with dedicated wheelchair space using the MaxiPlus® configuration. Its advanced NoRamp® technology eliminates the need for external ramps by lowering the vehicle's internal floor and rear tailgate, creating smooth ground-level wheelchair access at the touch of a button.

Designed for convenience, the AutoTailgate® system provides fully automated opening, while the spacious interior meets international accessibility requirements with comfortable wheelchair dimensions and improved passenger safety. The conversion is ideal for families, community transport providers, and wheelchair taxi services looking for a reliable mobility solution.

The G24 conversion is available for popular vehicles including the Kia Carnival, Hyundai Staria, and Honda Odyssey, with additional models planned for the future. Optional features such as turning seats, hand controls, automatic door openers, and advanced wheelchair restraint systems can also be added for enhanced comfort and safety.

With expert conversion services and support from Gilani Mobility New Zealand, the G24 Ultimate NoRamp® Wheelchair Accessible Vehicle Conversion helps create greater freedom, independence, and accessibility for people across New Zealand.
