

PUSH PULL Easy Adaptive Driving Equipment for Accessible Driving in New Zealand

Driving independence plays an important role in improving mobility and confidence for people who require vehicle adaptations. The PUSH PULL Easy Adaptive Driving Equipment by Fadiel, available from Gilani Mobility New Zealand, is an advanced hand control solution designed to provide a comfortable, smooth, and safer driving experience.

This innovative adaptive driving system combines brake and accelerator control into a single easy-to-operate lever mechanism, allowing drivers to manage vehicle functions with minimal effort. The telescopic rod connected to the accelerator ensures consistent acceleration, while the manual push movement provides effective brake control for a more convenient driving experience.

Designed with flexibility in mind, the PUSH PULL system includes adjustable lever settings, multiple push rod positions, and customisable spring resistance to suit individual driving preferences. Its durable C40 steel construction delivers reliable performance and long-lasting use, making it a practical choice for adaptive vehicle modifications.

The ergonomic design helps reduce strain while driving, and the convenient lever release feature allows able-bodied drivers to use the vehicle normally when required. With professional installation and support from Gilani Mobility New Zealand, users can enjoy improved accessibility, comfort, and independence on the road.

Experience greater driving freedom with the PUSH PULL Easy Adaptive Driving Equipment by Fadiel — a trusted mobility solution designed to help New Zealand drivers travel with confidence.
